

Comparação entre o sistema macieira/maçãs e o sistema micélio/espóroforo. Macieira e micélio são vegetativos; maçãs e esporóforos são os elementos reprodutores. Neste esquema combinaram-se os dois sistemas, com os esporóforos a substituírem simbolicamente a maçãs.

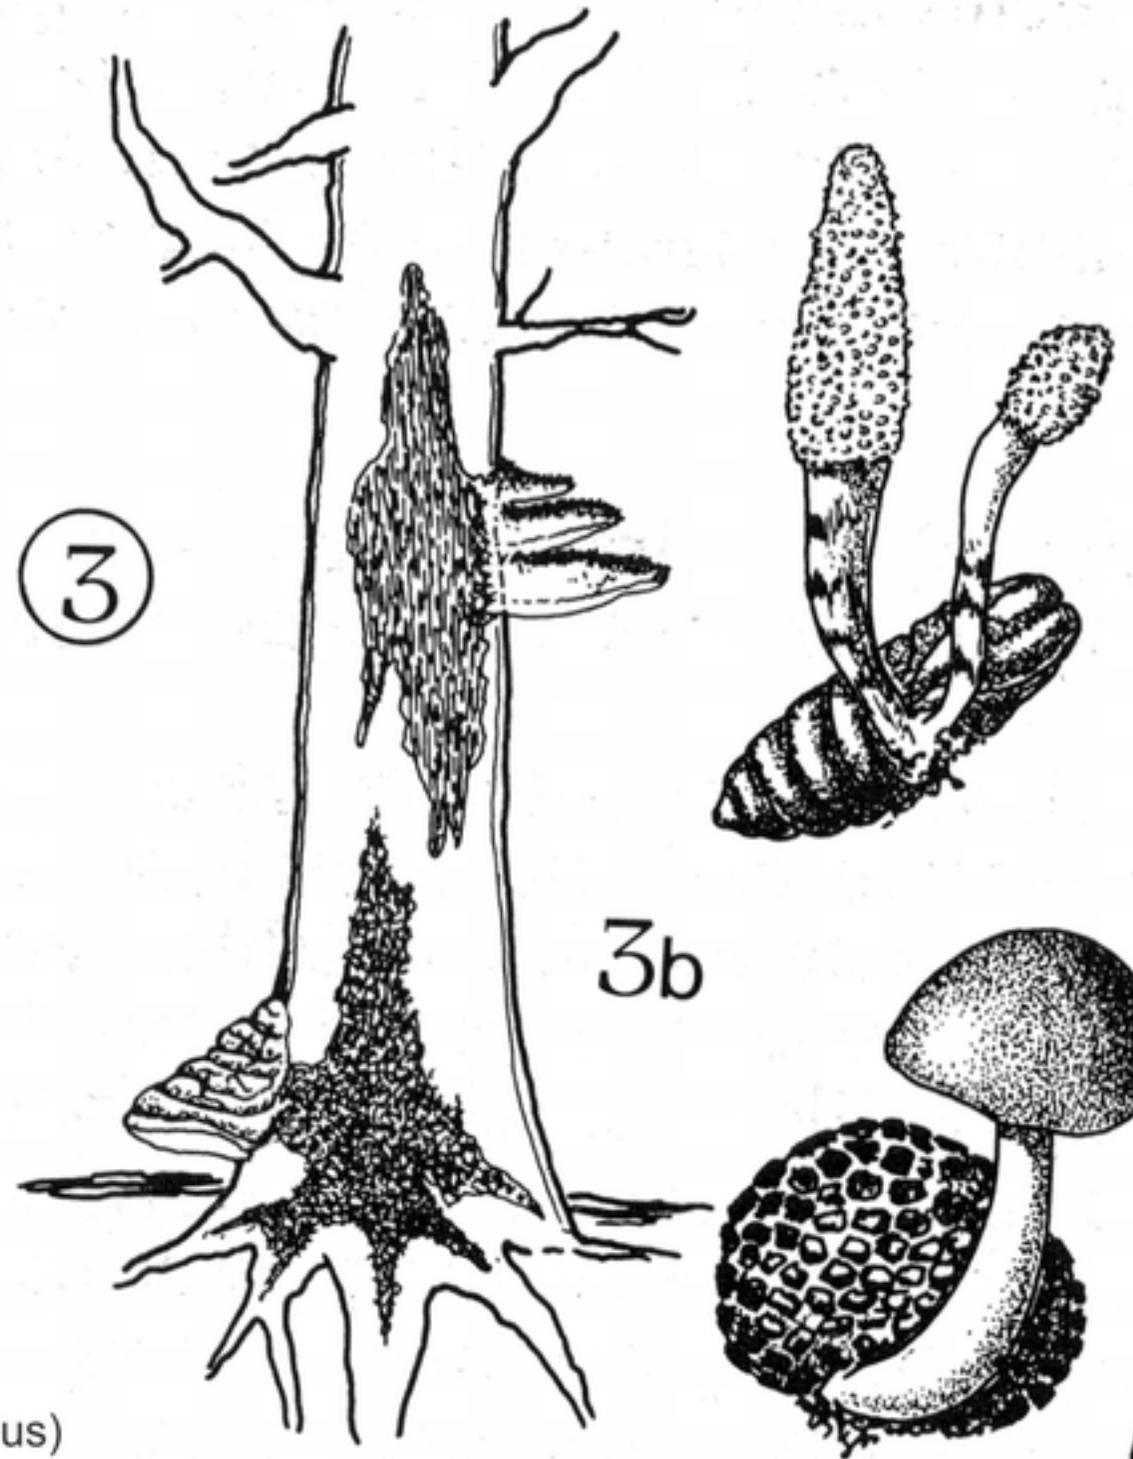

Ciclo de vida dum cogumelo. a: germinação do esporo; b: micélio primário; c: plasmogamia; d: micélio secundário; e: ansa de anastomose; f: fusão nuclear; g: núcleo com 2n cromossomas; h: meiose; i: libertação dos esporos.
